CHILI FERTIGATION, WAKUBA

Owner	: Mr Fajar
Crop	: Chili
Area	: 0.5 acres
Fertilizer	: partly Tricho Acti-Plus
Duration	: < 1 year
Soil	: cocopeat (fertigation)

Remarks:

- The **targeted** yield in each planting season is **2 MT** of fresh harvested chili fruit per season
- **Before** using RS Tricho Acti-Plus at the end of the planting season, the farmers can achieve the target but couldn't get more than that due to many plants were affected by viruses and **fungal disease**.
- **After** the application of **RS Tricho Acti-Plus**, before the planting season ends, they have **achieved** the **targeted yield** (2 MT) and still producing **more fruits**. The **life** and turgidity of the chili **plant** can be **prolong**. The rate of **fungal disease** occurrence also **reduced** when RS Tricho Acti-Plus were applied to the plant.
