

SABAH SOFTWOODS HYBRID FERTILISER SDN. BHD

SRI BANDARAN ESTATE, FORDECO PLANTATION

Owner	: Fordeco Plantation Sdn Bhd – Mr Sumail (manager)
Crop	: Oil palm
Area	: 43.33 Ha
Fertilizer	: K-Neutralizer
Duration	: 1 year

Remarks:

- Most of the area has flat topography with clay soils beneath. However, due to logging activities that were done nearby the area has caused the fibre to be washed away to Sri Bandaran area.
- The fibre that cover the soil has caused the soil condition to become peaty. For flat area, most of the palms were planted with mounding but for undulating area, there are no mounding nor terrace used.
- For block 98/2 according to them after the application of the Realstrong K-Neutralizer there was an increase of earthworm presence in the blocks surrounding.
- Presence of earthworms proves that the soil fertility in Sri Bandaran Estate has been improved after the application of RS K-Neutralizer
